smoked salmon, and warm dishes--even for breakfast. Afterwards, however, the meals gradually began to get worse, and finally became unbearable. Especially affected were the children. No special cooking was provided for them except that milk was issued in small quantities. It was quite impossible to feed babies caviar, salmon, and steaming sauerkraut soup for breakfast. Complaints were presented to the installation director who promised to remedy the situation, but conditions did not improve. Soon after this 50X1-HUM Germans were issued ration cards and were allowed to procure food supplies in bulk.

4. Following the price reduction of 1951, there was always a shortage of butter in the state-controlled stores, and it was often unavailable.

Therefore compelled to buy butter on the free market. Free market prices fluctuated with the availability of products. Desire 50X1-HUM items could not always be obtained. the Soviet customers paid considerably less for some products than we did. It seemed to be common knowledge that Germans were receiving 50X1-HUM higher pay than the Soviets. Therefore, the free market prices were, as a general rule, raised to fit purchasing capacity. It was not infrequently that the Soviet citizens objected

and they insisted that should pay the higher price. It was apparently agreed that should be charged as much as possible since, according to a Soviet saying, "The Germans are 50X1-HUM inconceivably rich and they can pay".

50X1-HU

- 5. Flour could be obtained only on holidays, e.g., the first of May, the October Revolution, etc. At other times this item was never available in government stores. It could often be bought on the blackmarket at a tripled price. The purchasing of this item was not always a simple matter since the blackmarket windors were extremely cautious in selling it, fearing the severe penalties. The shortage of flour was a mystery because white bread was always in sufficiency. However, four to eight weeks before the new harvest an acute shortage of bread was experienced which resulted in consumers having to spend many hours in "bread queues" which formed in the mornings in front of bakeries. In general, bread was a more important food item to the Soviets
- 6. Food supplies were more available on Gorodomlya Island than in the nearby areas. Therefore, the Soviets having access to the Island stores made daily food purchases for themselves and their friends who lived in Ostashkov. After working hours bread, cereals, and other food items were packed into sacks which were 50X1-HUM being taken from the Island, apparently to Ostashkov. It is possible that these items may have been diverted to blackmarkets located in those regions containing poorer collective farms. There were a number of these in the vicinity of Ostashkov.
- near Brest-Litovsk 50X1-HUM the apparent difference in the food prices and food availability. 50X1-HUM At train stops the natives offered to sell eggs, butter, cheese milk, eto, at a cost less than that which had been charged in 0s-50X1-HUM tashkov or on Gorodomlya Island.

Merchandise of Non-Soviet Origin

American in 1946, a great many products, especially canned goods were on sale at the free market stores. Other merchandise of non-Soviet origin included: coffee (eacked in bage bearing Brazilian markings); and shoes (imported from Czechoslovakia, and having the Bata trademark). 50X1-HUM Polish camped jams, among others, could also be purchased. The German manufactured goods available were: "Diament"bicycles (800 rubles), Thiel pocket watches (165 rubles), and many items of rayon lingeries and stockings containing the "Bamberg" trademark. Whether these items were imported 50X1-HUM from East Germany or manufactured by former German plants which had been moved to the USSR is unknown a large number of light industry plants including equip 50X1-HUM ment and personnel, had been transplanted to the USSR. It was also known that the Germans who worked in such plants producing consumer goods were repatriated much earlier, for instance, the Wellner-Silver plant personnel. Chocolate displaying the "Burkbraun" trade-

Rationing

9. During the period 1946 to 1952 gradual improvements in the availability of consumer goods became apparent. The only commodities that could be easily purchased in 1946 were volka and tobacco products. The food rationing cards which were graded into several categories:

SECRET.

mark was being sold in Russian wrappings. Burkbraun was a well

known chocolate factory formerly located in Cottbus.)

50X1-HUM

50X1

The non-working Soviet population and the wives of German deporte were allotted smaller food rations than were the German specialis German families which included several non-working members could	ts 50X1-HUM
hardly exist.	_

- 10. Basic food items, with the exception of milk and bread, were issued in bulk once per month. This rationing system presented a considerable problem to housewives who continuously were worried about the preservation of perishable items.
- 11. Immediately after the end of rationing (1947), the stores began to display better goods. However, all the goods on display were not always available for purchase. the following 50X1-HUM items were readily available as of 1940: corree, tea, cocca, candy, canned fish, marmalades, preserved fruits, numerous alcoholic beverages, cigarettes, bread (except a few weeks before the new harvest), salt, and a large assortment of toilet scap, perfumes, face powder, etc.
- 12. The price reduction was also reflected in an improvement in styles and wearing apparel. the clothes of the Soviets 50X1-HUM resembled tattered rags, but their clothes later improved considerably. Soviet textiles did not appear to be dye-proof, and faded easily.
- 15. The population's reaction to the improved purchasing conditions following the end of rationing varied. Many of the Soviets who had been in Germany and in other foreign countries during and after the war were careful in expressing themselves on this subject. They occasionally admitted that conditions abroad were better, but immediately hastened to add that these standards would soon be achieved and surpassed in the USSR. On the other hand, the Soviets who had never left their native surroundings of Ostashkov seemed to find it inconceivable to imagine conditions in the USSR less than perfect. This feeling was expressed by a Soviet woman who cleaned our home.

BALARIES

A Soviet engineer who has just graduated receives a monthly salary of 1200 rubles at his first position.

This initial salary is generally raised after two years, and, as others, could be supplemented by premiums.

50X1-HUM

A common laborer's monthly salary was generally 600 rubles.

a female interpreter monthly salary was 50X1-HUM

100 rubles, with which she was obliged to support her aged mother
who received a minimum pension allotment of 130 rubles per month.

HOUSING CONDITIONS

a group of recently renovated buildings. These consisted of two large brick buildings, each containing twelve three-room and kitchen apartments, and eight wooden constructions with seven two- and three-room apartments in each. The scientists and

50X1

specialists were placed in the brick buildings. Each family, regardless of its size, was assigned a three-room apartment. These apartments were freshly painted and a few were equipped with bath tubs; however, ovens and boilers were not furnished.

- 17. A field generator (Lokomobile) provided electric current which generally was undependable. The generator did not operate at all times, and when in operation it generated an unsteady current which produced a wavering sort of light. To supplement the poor cooking facilities, Primus petroleum burners were used. These burners appeared to be standard equipment in each Soviet home. An unmistakable smell of petroleum was present at the entrances of each house. Ovens and stoves could only be fired with wood. The monthly rent for a three-room apartment was 55 rubles.
- 18. In the beginning Soviet girls were assigned to the German families to do general housework such as cleaning, firing the stoves, etc. After a short time this help was withdrawn, and These girls had 50X1-HUM the girls were forbidden to enter These girls had also provided the firewood. With their withdrawal the German families were at a complete loss as to the procurement of wood supplies. ____finally resorted to chopping trees in the 50X1-HUM nearby forest, which was followed by serious complications. The Soviets considered this action as a serious offense against the state. Many of the Germans received reprimends, and this offense was held against them throughout their entire stay in the USSR. Requests for wood supplies were made to the director who always replied with a "saftra" - tomorrow, or "skoro" - soon. learned that these terms could mean tomorrow, next month, or next year. Later were advised that wood could be bought from the installation's supply dump at 45 to 55 rubles per cubic meter. This wood was often of very poor quality and we felt that it had been procured somewhere at a very low cost and was being resold at a considerable profit -- of which the director was receiving a sizeable amount. complaints were usually rejected with the count 50X1-HUM charge that it was own fault. should not have started 50X1 should not have started 50X1-HUM own fault. the war and invaded their country; this had caused their not 50X1-HUM being able to gather lumber for nearly seven years.
- 19. With the arrival of a group of Germans from the Moscow region in the spring of 1947 housing conditions on the Island became extremely overcrowded. In meeting this situation the Soviet administration merely ordered that many of the Island families would have to give up some of their rooms to the new arrivals. These crowded circumstances resulted in many disagreements and quarrels, and occasionally in fisticuffs.
- 20. The housing conditions of the Soviet common laborers and those of the higher-paid employees differed to a great extent. This obvious example of social inequality in the heavily-propagandized "classless society" of the USSR impressed me very much.
- 21. Most of the Germans possessed their own furniture. Those that did not have any rented it from the Soviets at a monthly rate of 100-150 rubles. The Soviets especially marvelled at 50X1-HUM furniture. However, many felt superior in their belief that such things as electricity and other inventions were enjoyed solely in the USSR.

SECRET

50X1-HUM

50X1

After two years the Soviets billed 30 rubles per month for electricity during the summer, and 60 rubles per month during the winter. During the last few years were required to pay a monthly sum of five rubles per person for water. 23. The structure of family life in the USSR is completely different from anywhere else in the world. attribute this to the fact that both man and wife are employed during the day and are seldom together at home. The children spend their days at the kinder-garden. During the evenings the parents attend numerous meetings, training courses, etc. Few of the Soviet women that are employed cook at home. Even luncheons are esten in public eating places. virtually no "family life" in the USSR as it is known in the Western world. 24. no trial marriages There appeared to support only the children. The children were brought to the kindergarden at 8:00 A.M., and were taken home at 5:30 P.M. A small percentage of the parents' salary was deducted for the care of children. It probably did not exceed 60 rubles per month. The children received all their meals at the kindergarden. SOX1-HUM 50X1-HUM 50X1-HUM 50X1-HUM 50X1-HUM 50X1-HUM 50X1-HUM 50X1-HUM			50X1-HUM
to be many unattached women: possibly they had been widowed during the war. 50X1-HUM 25. When a Soviet husband and wife are divorced, the man is obligated to support only the children. The alimony is not paid by the man directly, but is deducted from his salary and paid to the former wife, or whoever has assumed the responsibility of rearing the children. The deductions constitute a prescribed percentage of the man's total earnings. After three years of waiting, a Soviet engineer finally obtained his divorce. The wife was given custody of the child. The engineer's monthly salary was 2000 rubles, of which he had to pay about 30 per cent (600 rubles) as support for the child. His former wife was employed as a librarian and earned 1500 rubles per month. Her salary, coupled with the money allotted her for her son's support resulted in her having a higher monthly income than her former husband. 26. The kindergarden building on Gorodomlya Island contained eight to 10 rooms. The ages of the 25 children in attendance there ranged from a few months to seven years old. They were in the care of a chief nurse who was assisted by two or three other nurses. The staff also included a laundress, cleaning woman, and a cook. 50X1-HUM the mothers were satisfied with the care their children were receiving. - the Soviet privileged class is primarily composed 50X1-HUM of those who worked in, or with, the Party of MVD. Also in this class were those who occupied important positions, e.g. 50X1-HUM director, chief engineer, etc., and the members of the government, whom everyone seemed to consider demigods.
- 28. It is quite understandable that persons with political background and authority were considered important and in a different
 class. Naturally everyone sought their favor in an effort to
 avoid unpleasantnesses and gain advantages. These people were
 always better dressed and more genteel than the common workers.
 The privileged class enjoyed better housing facilities, but their
 children were not automatically selected for higher education.

50X1-HUM

considerable importance was placed on good grades and report cards (Zeugnis) for admission to higher educational institutions. With a favorable school report one could receive a relatively higher scholarship (Stipendium) amounting to approximately 300 to 400 rubles per month. However, the poorer Soviet families often could not afford to let their children continus schooling to the age of 20 or 22, even if they were in possession of a good scholarship. Many parents anxiously awaited the time when their children completed public school (at about 15 years of age) so that they could begin to earn a living and thereby assist the family. (Public school was entered at the age of seven.)

29. a certain amount of tension existed between the different classes, but it could not be detected on the surface. The people were simply uncommunicative on this subject either 50X1-HUM from fear or caution.

30.

During 1948 great administrative changes occurred within the Ministry of Armament and Munition Names, 50X1-HUM which until then had been important, suddenly disappeared; many of the signatures which appeared were new and completely unknown. It was then rumored that espionage acts had been committed 50X1-HUM

RELIGION

32. Whereas almost all of the older Soviets who had been raised during the Czarist times remained close to the church (they usually wore a crucifix), the attitude of the younger Soviets was either indifferent or definitely negative.

ŀ	50X	

33. Services were held in one of the numerous churches in the Ostashkov area. The other churches were sither in ruins, neglected and abandoned, or served as bakeries, dairies, etc. The church in which services were held was well attended. Soviet clerics and nums were frequently seen strolling in the streets. It was said that these nums received no support from the state, but were earning their livelihood with knitting, embroidery, and other needlework.

50X1-HUM

CRIME AND CORRUPTION

34.	Embezzlement was the most frequent misdemeanor
	As a result, very few of the Soviet
	public officials remained in their positions for any length of
	time. This type of fraud was a daily occurrence. For example
	a Soviet woman, after having held the position of manager of
	the Island's post office branch for two years was sent to a
	labor camp for misappropriating 20,000 rubles; a sales girl em-
	ployed in the clothing store was sentenced to four years of
	hard labor for overcharging customers on merchandise, especially
·	on rugs and furs, and making a profit as high as 2,000 rubles
	on one sale. The pay clerks and bookkeepers were also twice
	replaced for having missopropriated public funds.
4	fraud and embezzlement were not look_OX1_HIIM
	upon as crimes against society or as serious matters, but

- 35.. Thievery and pick-pocketing often occurred in the streets and public markets. One had to be very careful when carrying anything in pockets and handbags.

 50X1-HUM stealing seemed to have subsided to a certain ex50X1-HUM
- 36. An ancient monastery which had been converted into a prison for juvenile delinquents was located on the island of the Peshi in Lake Seliger. It could be seen when one travelled from Gorodomlya to Ostashkov. From the distance could see that prison walls and watchtowers had been erected. It was said that the young criminals detained there were making telephone instruments. 50X1-HUM
- 37. In general, persons returning from prisons were neither shunned nor in anyway ostracized by the Soviet population.
- 38. It appeared that everyone in the USSR was susceptible to bribes. The post official, the tailor, the shoemaker could all be induced to expedite their work for a consideration (usually vodka).

 Furthermore bribery no doubt also met witoxi-HUM success in higher Soviet circles.

PUBLIC OPINION

50X1-HUM

ź9.	Negative attitudes on the parts of the Soviets toward the Com-
	munistic regime were not perceptible, since the Soviets would
	not divulge their opinions to us. However, the support of the
	Soviet system is obviously strong, particularly the support of
	the younger generation.

50X1

- 41. "American monopolistic capitalists" were held responsible for all wrongs, evil, and disunity among nations. This was standard propaganda, and was repeated incessantly.
- 42. According to the Soviet radio, the Marshall Plan is nothing more than an "evil capitalistic deception maneuver". The Soviets seemed to know nothing further about the Plan.
- the Soviets fear another war. They were made 50X1-HUM to believe that; the Americans were planning to overrun the people's republics (Volksdemokratien), and thereby start wa50X1-HUM

the outbreak of the Korean War did not produce undue excitement or any particular reaction on the part of the Soviet population. The Soviets did not seem to get aroused about events which occurred outside of the Soviet borders, and accepted news events somewhat passively. Everybody, as a matter of fact, was convinced that the Chinese soldiers had bewildered questions as to the ., 50X1-HUM a hand in the fighting. legality of Chinese participation were usually answered with, "Could you ever distinguish a Chinese from a Korean"? This was considered a joke. Daily newspapers displayed on bulletin boards and walls carried stories of the newly reported bacteriological warfare. During protest meetings signatures were collected, resolutions passed, etc. people were beginning to believe what they read and heard. No news could be obtained by the Soviet masses other than that disseminated by the propagands organs.
